Abstract (en)

[origin: EP1584415A1] The support has a cylindrical body (2) extending along a longitudinal axis and limited by two end faces (3, 4). Recesses (15, 16) are adapted to receive electrical supply units and electronic circuit boards which are arranged and distributed around the axis and close to the periphery of the support. A conduit extends along one end face of the support using a chafing sleeve with circular tubular section. An independent claim is also included for a dynamometric tool including a support module.
