Abstract (en)  
[origin: EP1584472A1] u Register device (01) comprises a first and a second roller (02, 04) that in a first mode of operation define a gap (07) through which webs (03, 06) can pass. The first roller can move relative to the second roller to register the webs. In a second mode of operation, a control device (11, 12) pressing the first roller against the second roller is arranged so that the webs are clamped between the rollers. u Preferred Features: The control device is coupled to a sensor detecting obstruction of the web path.
