Abstract (en)

An apparatus for the manufacture of a packaged food product in a closed package, comprising: support means arranged to carry an open packaging article for said product; first dispensing means arranged to dispense a first component of said product to a said open packaging article carried on said support means; at least one further dispensing means arranged to dispense a further component of said product onto a said first component of said product carried by said packaging article; and closing means arranged to close said packaging article whereby to provide said packaged food product. <??>In particular, an apparatus in which a sandwich product is constructed in a receptacle which will form at least part of the packaging of the final food product. The apparatus will reduce the spillage of sandwich fillings during the manufacture of the sandwich by constructing it within the packaging article which will form part of the final packaging of the sandwich product. <IMAGE>
