Abstract (en)

The Bailey bridge consists of sections to form a profile bridge with at least two carriageways (1a,b), connected by cross struts defining the bridge width, and wedge sections at the end for driving-on. The cross struts are adjustable in length between the bridge sections, to adjust the distance between the sections between min. and max. width. A cross strut is formed by a spindle (5), a pair of trapeze arms (6), and hinge ends (7) on the end of the arm associated with the bridge sections. The other trapeze arm end (8) has a spindle nut moving on the spindle via a thread. The cross strut may also be formed as an adjusting drive, with levers and hydraulic cylinders.

Abstract (de)

Es wird eine luftverladbare Verlegebrücke vorgeschlagen, deren Brückenteile in der Breite einstellbar sind, so dass eine kleine Transportbreite und eine große Nutzbreite von zum Beispiel 3,50 m einstellbar sind. Dazu sind Querstreben (4, 4a) zwischen den Brückenteilen (1a, 1b) in ihrer Länge verstellbar, wodurch der Abstand der Brückenteile (1a, 1b) einstellbar ist zwischen einer geringsten und einer größten Breite der Brücke (1).
