Abstract (en)
[origin: WO2004063482A1] The invention concerns a building system comprising a wall, said wall including an assembly of blocks (1 to 7) and a framework, consisting of horizontal elements (8, 11, 12) and vertical elements (10, 11), to guide and secure the assembly of blocks in a vertical plane and in a horizontal plane. The invention is characterized in that at least one block comprises at least one housing extending from one first lateral surface of the parallel block to a first surface of the wall and in a plane perpendicular to said lateral surface, said housing being designed for the passage or the installation of means (14) for fixing a secondary work on the wall. The invention also concerns a block suitable for using such a system.
