Abstract (en)
[origin: WO2004063513A1] The invention relates to a motor-driven element (1) of a partition wall, comprising at least one motor-driven locking profile (5), for the securing and/or sealing of a motor-driven element of a partition wall, comprising at least one motor-driven sealing profile in an end position. According to the invention, the motor-driven element (1) can be controlled as simply as possible, whereby the voltage applied to the element for operation of the element is switched in an end position of the element by a switching device, such that at least one locking profile (5) is extended after reaching the end position and retracted before leaving the end position.
