Abstract (en)

[origin: EP1586743A1] The shroud has sectors (11) reunited end to end with interposition of a sealing system (26). The sealing system has rectilinear strips (27, 28, 29) extending between the adjacent sectors. The strips are housed in respective rectilinear slots (31, 32, 33), where the slots are independent and are arranged opposite to each other in adjacent radial sides of the sectors. An independent claim is also included for a high pressure turbine having a shroud forming an outer cover of a rotor.
