Abstract (en)

[origin: WO2004062880A1] The invention relates to a device (1) for distributing molten plastic in a stack mold (2). The distributing device (1) comprises a segmented main channel (4), the segments (4.1, 4.2, 4.3) of which can be effectively connected to each other in a sealing manner in the area of separating points (7). The individual channel segments (4.1, 4.2, 4.3) are provided with valves (10) for sealing the channel segments, especially during opening of the mold.
