Abstract (en)

[origin: FR2850322A1] The tool has a handle (301), an optical unit (303) able to read the tool position on a grid projected on to the large surface and an orientation unit (305). These data define the tool position and attitude and are used with a localization section (309a) in a memory (309) to find stored printing instructions which are applied to printing means (307). All the tool operations are controlled by a microprocessor (304) and bus (310)
