Abstract (en)
[origin: WO2004067804A2] The invention relates to a method for coating objects, particularly sanitary ware such as plumbing fixtures, shower fittings and the like, during which at least one layer made of copper, nickel or of a copper-nickel alloy is firstly applied to the object. The object itself and/or at least the uppermost applied layer are/is then subjected to a mechanical surface treatment, and at least one nickel-tungsten layer and/or at least one palladium-nickel layer are/is applied to the object or the surface-treated layer. The surface treatment preferably ensues by brushing and/or blasting. This enables objects to be provided with a specific appearance, particularly a high-grade steel-like appearance.
