Abstract (en)  
[origin: GB2397074A] Profiled steel decking comprises a steel sheet roll formed to define crests 1 and troughs 2 separated by inclined webs 3. The boundaries between the webs and the crests are radiussed to define corners 8 each having a smooth curvilinear profile. Each web may include two or more vertically spaced linear rows of embossments 10 and the troughs may include two stiffening ribs 14 15. Each crest may be formed with a generally 'V' shaped projection 9 which, in use, defines a shear connector between the decking and the concrete layer cast over the upper surface of the decking.
