Abstract (en)
[origin: WO2004063634A1] Water cooler (20) comprising: a compressor (1) sending a cooling medium to an evaporative condenser (4) in which condensation heat is subtracted by the air flow sucked by the pipe (14) and let out by the fan (12) through a second pipe (13). Water is sent by the pump (5) to the dispenser (8), which sprays said evaporative condenser (4) with said water. The evaporator (10) cools water for air conditioning. The cooler can be equipped - for heating water for sanitary use - with a second condenser (18) arranged in series with the evaporative condenser (4).
