Abstract (en)
Mast with an improved structure, in particular for sailboards or the like, comprising one or more tubular elements having a progressively variable diameter, the body portion of said elements being made by winding fibre sheets impregnated with synthetic resins on a mandrel. <??>Each such tubular element (3) of the mast has two sectors (4) arranged in opposition and symmetrically relative to the plane of the sail (2), which are provided with reinforcements imparting a degree of flexural rigidity to the mast that is greater in the plane (B) perpendicular to the sail plane than the degree of flexural rigidity in the sail plane (A). <IMAGE>
