Abstract (en)
[origin: EP1589158A2] A method for fitting facade panels onto fixed horizontal rails (32) mounted on the outside of a building has the rear of each panel fitted with vertical rail with a claw shaped bottom end to clip onto the horizontal support rail. The panel is fitted with a clip and tilt action and is secured to other parts of the fixed support frame by conventional fasteners. The design enables individual panels to be removed and fitted without affecting the adjacent panels.
