Abstract (en)

[origin: EP1108849A2] A method for fitting an access door into a sectional lifting large door has the access door extending over two sections. The hinge between the sections has a small gap, less than a finger width i.e. typically 4 mm and not more than 10 mm. The access door closes into the sectional door and flexes as the sectional door is raised vertically and round into the horizontal storage position under the roof of the hall.
