Abstract (en)

[origin: EP1128105A2] A water mixing valve having two water inlets (2,4), a mixing chamber (12), a rotatable control member (14) having openings for controlling flow from the water inlets (2,4) to the mixing chamber (12), the control member (14) comprising a substantially circular plate (14) having first and second surfaces (20,22), the water inlets (2,4) sealing against the first surface (20) and the openings (18,16) extending between the first and second surfaces (20,22) and a support (24) for supporting the control member (14) on the second surface (22), the support (24) including a base wall (24a) generally parallel to the control member (14) and a peripheral wall (24b) extending from the periphery of the base wall (24a) to the periphery of the control member (14) so as to support the control member (14) and form the mixing chamber (12) therebetween wherein the support and control member (14,22) are together rotatable relative to the water inlets (2,4), the support (24) including surfaces against the openings (16,18) in the control member (14) for directing flows from the respective openings (16,18) towards one another and into the mixing chamber (12) for efficient mixing, the base wall (24a) including inner and outer surfaces, the inner surface facing the second surface (22) of the control member (14) and the water mixing valve further includes a thrust race supporting the support at an outer periphery of the outer surface of the base wall (24a).<IMAGE>
