Abstract (en)

[origin: US2007033778A1] A device for processing a supple porous textile piece having at least one first surface and one second surface adjacent to the first surface, the process being carried out on the second surface and not on the first surface. The device includes a departure area and an arrival area for placing the textile piece. The departure area is equipped with a non-porous mobile mask with a shape corresponding to the first surface. The device also includes a processing area equipped with processing means, a pick-up head with a suction plate having a shape corresponding to that of the mask. The pick-up head being moveable among the departure area, the processing area, and the arrival area.
