Abstract (en)
[origin: WO2004069019A2] A washing machine is disclosed, to minimize power loss when transmitting power generated in a motor to a washing shaft. The washing machine includes an outer tub provided in a cabinet and storing washing water therein; an inner tub rotatably provided in the outer tub and receiving laundry therein; an agitation device rotatably provided in the inner tub and agitating the laundry and washing water; an outer rotor type motor for rotating the agitation device and the inner tub; a power transmission device connected between the motor/agitation device and the inner tub to have the same rotation axis in the motor, the agitation device and the inner tub, and transmitting power of the motor to the agitation device and the inner tub according to an operation mode; and a drain device for draining the washing water from the outer tub to the external.
