Abstract (en)
[origin: WO2004065240A1] A safety and pouring plug is provided with a duct (3) in which is provided a ball (2). When using the plug (1), the ball (2) can be placed in an outlet (9). For avoiding direct contact and thereby risk of contamination, a resiliently bending flap (12) is formed at the outlet (9). By manual actuation with a user's finger (21), the flap (12) can press the ball (2) free from its engagement with the outlet (9) of the duct.
