Abstract (en)
[origin: WO2004069708A1] The invention relates to a printing machine that comprises at least one printing group (03), one folder (16) and at least one turn-and-mix stage (07) that supplies a web (04, 06) output by the printing group (03) to the folder (16). The path of the web (04, 06) from the printing group (03) to the folder (16) projected into the horizontal plane is bent in the area of the turn-and-mix stage (07). The turn-and-mix stage (07) comprises a longitudinal cutting device (08) on the input-side for cutting the web (04, 06) into two partial webs (13, 14) and at least two horizontally displaceable turning bars (09, 11) around which one partial web each is wrapped.
