Abstract (en)
[origin: DE10303979B3] The letter stack compartment (23) has the letters supported on edge via a stack base (31) and a stack support (32) which is movable in the horizontal stacking direction, with a driven displacement device (34), positioned in front of the stacking point, similarly displaced horizontally for emptying the stack compartment. The drives (35,33) for the displacement device and the stack support are controlled for movement of the stack support by a greater amount than the displacement device during the emptying process.
