Abstract (en)

[origin: WO2004033828A1] The invention relates to an electrically unblockable release device (26) for doors, which is suitable for integrating into door frames of single doors or into the fixed leaf of double doors. Said release device (26) comprises a blocking lever (33) which acts on a catch (35) and is blocked or released by an armature (1) of an electromagnet. The release device (26) functions according to the closed-circuit current principle and the coil (2) of the electromagnet is embodied in such a way that the housing (15) thereof simultaneously forms an abutment for the U-shaped armature (1), in such a way that the armature (1) is guided beneath the coil (2).
