Abstract (en)

[origin: FR2850490A1] The antenna comprises dielectric support with printed electrical conducting track (4) and insulating strip (I) for connector (7) between track's end points. (I) is impressed with notches (12,13) for the track, in the form of spiral lines (14), or the connector. The track and/or connector can be printed by heliogravure method and subsequently metallised using chemical or electrolytic process.
