Abstract (en)

[origin: EP1591024A1] The method involves producing product data sets, where each set corresponds to approximately equal portions of a product mass flow entering a transport section (12). The product data sets are written into corresponding memory units of a first-in-first-out stack memory. The product data sets corresponding to the product mass flow emerging from the transport section are read from the memory. An independent claim is also included for a system for tracking product data for a product mass flow in a transport storage section of a tobacco-processing industry.
