Abstract (en)
[origin: EP1591039A1] Mounting profiles (17, 18) extending parallel to the movement direction for an outer fitting (2) are secured to vertical support profiles (13, 14). Each mounting profile has an inner part (19) of a linear guide (20) secured to it and the outer part (21) of this guide is releasably connected to a basket (12) associated with an inner fitting (8). Cross-struts (15, 16) are releasably connected to the mounting profiles. The rear part (10) of the cupboard (1) is covered by an adjacent cupboard unit and the front part (7) is sealed with a door. An outer fitting with baskets (6) can be moved along a first guide means (4) secured inside the cupboard so that it can be pushed into the front part of the cupboard. The outer fitting can be pulled out and then pivoted about a vertical axis (3) to allow access to the front part of the cupboard. The inner fitting has baskets secured to it which can be moved along a second guide means (9) secured inside the cupboard so that they can be moved from the rear part into the front part of the cupboard when the outer fitting has been pulled out and swung upwards. The second guide means comprises two vertical support profiles connected via upper and lower cross-struts. Guide pieces mounted on the cross-struts cooperate with the second guide means.
