Abstract (en)

[origin: US2005241917A1] A device for transferring book blocks or books on a conveyance path for synchronized processing in a downstream machine includes a feeding device for the successive book blocks and a synchronizing device downstream of the feeding device. The synchronizing device has a conveyor belt that is connected with the feeding device in a way that allows conveyance. The book blocks are fed on the conveyor belt with lateral guidance to a drive device, which is drive-connected with the conveyor belt and acts to convey the book blocks.
