Abstract (en)
A sunscreen assembly is provided comprising a winding tube (1) which is rotatably mounted on a stationary axis (2) and which is springloaded in a first rotational sense and which further comprises a sunscreen (7) which can be wound onto said winding tube (1) when the winding tube rotates in the said first rotational sense and which can be wound off said winding tube when the winding tube is rotated in a second rotational sense against the spring-load. A friction mechanism is positioned between the stationary axis (2) and the winding tube (1), which friction mechanism only generates a friction force on the winding tube when the latter rotates in the first rotational sense.
