Abstract (en)

[origin: EP1591845A2] The device has ratchet fastening lugs (2a) that are configured to hold a coupling tube (3) under elastic strain and oriented to resolve the force exerted upon it into a component parallel to a translatory displacement. The coupling unit is joined with a receptacle (1a) in which a straight section allows the profile of the straight section of the coupling unit to be deformed when the fastening lugs are coupled.
