Abstract (en)

[origin: WO2004069004A1] Disclosed is a refrigerator that is provided with supports for chilled products, which can be extracted on telescopic rail arrangements. A telescopic rail arrangement comprises two rails (6, 7) which, from a cross-sectional perspective, encompass a bottom (9) and two webs (10, 11) that protrude from the bottom and delimit a channel (12). The two rails (6, 7) support an engaging element (13) that can be moved in a longitudinal direction within the channel (12) of the other rail (7, 6). The rails (6, 7) also support a buffer member (15) which is located at one end thereof and faces one of the webs (10) of the other rail (7, 6).
