Abstract (en)  
[origin: WO2004062675A1] Use of a glycoalkaloid composition containing at least one Z Glycoalkaloid of formula I, wherein: either one or both of the dotted lines represents a double bond, and the other a single bond, or both represent single bonds; A: represents a radical selected from the radicals of general formulae (II) to (V); each of R<1> is a radical separately selected from the group consisting of hydrogen, amino, oxo and OR<4>; each of R<2> is a radical separately selected from the group consisting of hydrogen, amino and OR<4>; each of R<3> is a radical separately selected from the group consisting of hydrogen, carbohydrate and a carbohydrate; "X" is a radical selected from the group comprising -CH2-, -O- and -NH2-; and wherein the compound includes at least one R<4> group that is a carbohydrate or a derivative such as one selected from the group comprising glyceric aldehyde, glycerose, erythrose, threose, ribose, arabinose, xylose, lyxose, altrose, allose, gulose, mannose, glucose, idose, galactose, talose, rhamnose, dihydroxyactone, erythulose, ribulose, xylulose, psicose, fructose, sorbose, tagatose, and other hexoses, heptoses, octoses, nanoses, decoses, deoxysugars with branched chains, (e.g. apiose, hamamelose, streptose, cordycepose, mycarose and cladinoses), compounds wherein the aldehyde, ketone or hydroxyl groups have been substituted (e.g. N-acetyl, acetyl, methyl, replacement of CH2OH), sugar alcohols, sugar acids, benzimidazoles, the enol salts of the carbohydrates, saccharinic acids, sugar phosphates; as an IL-6 antagonist.
