Abstract (en)  
[origin: WO2004067279A1] The invention relates to a printing group (3) of a printing press, preferably a rotary press, comprising at least one ink-transmitting roller (27), at least one bearing block which can be displaced relative to the frame (2) of the printing group and within which one end of the ink-transmitting roller (27) can be mounted in the printing position while said end of the ink-transmitting roller (27) is released in the releasing position of the bearing block, and a doctor blade chamber support (16) which supports at least one doctor blade chamber (31) that can be placed against the ink-transmitting roller (27), and is connected in a torsion-proof and displacement-proof manner to the bearing block (4) in the printing position of the bearing block (4). The doctor blade chamber support (16) permanently rests on the bearing block (4) via supporting elements (18, 28).
