Abstract (en)
[origin: WO2004072596A2] The invention relates to a method for parameterising recording measuring appliances, especially heating cost distributors, which are used to determine the proportional heat consumption in units of use in relation to the entire heat consumption in an accounting unit or a user group. The inventive method is characterised in that at least one heating cost distributor (HKV') to be parameterised is provided for use in the accounting unit (AE); the parameterisation of the heating cost distributor (HKV') provided is carried out according to the evaluation system used in the accounting unit for the heating cost distribution; the parameterised heating cost distributor (HKV') has a measuring process or a mode of operation for determining a consumption value that is compatible with the measuring process or mode of operation of the previous heating cost distributor (HKV) used in the accounting unit (AE); and despite using different makes of heating cost distributors in the accounting unit, an essentially uniform evaluation system for the detection of consumption values is obtained for the accounting unit (AE).
