Abstract (en)
[origin: EP1445718A1] The method involves associating a storage position and/or optically detectable identifier with a stored object, acquiring an electronic image at a defined time for determining the occupancy of the position and/or for scanning the identifier, transmitting a signal characterizing the image to an evaluation device via a mobile communications interface and using the signal to match a state indicator to the position and/or identifier. Independent claims are also included for the following: (a) a resource planning system (b) a computer program for a resource planning system (c) and a computer program for a sensing device.
