Abstract (en)

[origin: US2006152339A1] The invention relates to a locking storage device in which objects are deposited for the later removal thereof. The inventive device consists of: at least one safe-deposit box (2) which is intended to house the object and which comprises a door (3) and a lock (4), a code input device (9 a , 9 b), and a control unit (11) which is designed to authorise an object to be deposited therein and subsequently removed therefrom following the entry of a removal code. The device also comprises a weight sensor (14 a , 14 b) which supports the weight of the safe-deposit box. The aforementioned control unit is designed to determine the weight of the object contained in the safe-deposit box (2) once an object has been deposited therein, to determine the variation in the weight of the safe-deposit box when an object is being removed and to emit an alarm signal when the object has been removed if said variation does not correspond to the weight of the object.
