Abstract (en)
[origin: WO2004073245A1] The invention relates to a method for transmitting data between a transmitter (BS, MS) and a receiver (MS, BS) via a wireless data channel of a communication network (CN). Said method comprises the following steps: the transmitter transmits data to the receiver, the transmission being characterized by at least one transmission parameter which is selected based on a first channel quality that is known to the transmitter; the receiver receives the data; the receiver determines the first channel quality known to the transmitter from said data via the at least one used transmission parameter as well as a second, current channel quality via the quality of the received data; and the receiver compares the first channel quality with the second channel quality.
