Abstract (en)

[origin: EP1448039A1] Installation device comprises a number of connecting channels provided on a first device site (3) and on a second device site (4) for a current flow. A supply unit (5) is connected to one of the device sites. A further device, especially a distribution component (9) is also provided and is connected to one of the device sites. A device unit (11) is also included to influence the flow paths. An independent claim is also included for an installation system.
