Abstract (en)  
[origin: EP1593318A1] The applicator (1) has a wall (10) that is partially elastically deformable and attains two stable configurations. A wall (20) defines with the wall (10) an inner space in which a product to be applied is disposed, and a set of bodies such as small balls, are disposed in the space. The bodies are applied against the wall (20) by the wall (10) when the wall (10) is in one of the two configurations. Independent claims are also included for the following: (A) a kit comprising an applicator and a product to be applied to the skin, the mucosa, or the integument with the applicator (B) a method for applying a product on the skin.
