Abstract (en)

[origin: EP1593468A1] The device has a work frame (5) and a movable platen (6) placed on both sides of a path for clamps of a collet chuck (4) and nozzles (11) connected to supply of air under pressure, for directing air jet towards the platen. The air jet is directed during stop phase of the chuck, to stop sheets (7) between the frame and the platen. The nozzles are situated under rear transversal edge (5a) of the work frame.
