Abstract (en)
[origin: EP1593482A2] The glueing machine consists of upper and lower transporter belts (9,16) on each side of the machine, whereby the lower belt is guided on a roller plane (4) and the upper belt on a roller rail (3) situated in the middle of the machine. It has a device (7) to guide in overlapping and/or interweaving side parts of the folding box components, which is fastened to the middle rail and is driven by the middle upper transporter belt. The device is held on a holding frame (5) in a separate carrying frame (8) which is fastened on the holding frame in addition to the upper middle roller rail.
