Abstract (en)

[origin: EP1593505A2] The method involves lying a printing plate (1) having fitting stampings on alignment pins. A trigger signal is released by one of the pins on recognition of an exact position of the plate, for a camera system. Information of reference positions (3, 4) is read by the camera system. The positions are correlated to a print image (2) in form of mark or coding found in or by the side of the image. The positions are determined by a computer system, at the stampings.
