Abstract (en)
[origin: EP1593621A1] The device for the forming of stacks (10) of flat products, especially paper products has at least two stacking tables (42) which move along a circuit-like table orbit (68). The stacking tables at least segment-wise are flexible and therefore in their form are conformable to the curves (99,102,116,130) of the table orbit at least segment-wise and at least in sub-sections. In a stacking section (44) the table orbit between the receiving section and delivery section (46) extends in a straight line, and the stacking tables in the stacking section are orientated horizontally. An independent claim is included for a method for the stacking of products by the proposed device.
