Abstract (en)
[origin: EP1593772A1] A heating structural component (1) inserts in a flow channel and has a heating element (5) for a stream (6) of hot air to pass through in a through-flow direction (D) and temperature sensors (4) to detect the temperature of the stream of hot air. Independent claims are also included for the following: (A) A clothes drier for drying damp washing in a stream of hot air; (B) and for a method for assembling a clothes drier, through which, when operating, a stream of hot air is heated up so as to heat damp washing.
