Abstract (en)

[origin: EP1593800A2] The closure device (1) has a cylinder core (8) in a cylinder housing (G) with key channel (15) for fitting the key shaft of the key (3). An insert member (27) on the key shaft (19) has a shaft (28) and head (29) so that the shaft fits into an opening (26) in the key shaft (19) and the head (29) interacts with a complementing locking part (18) mounted in a bore (16) in the cylinder core. Independent claim describes key with insert member with shaft fixed in broad side opening (26) whilst a head (29) projects over the broad side face (21).
