Abstract (en)

[origin: EP1593809A1] The device has an end fitting (12) integrated to lateral ends of a strip in order to define a gliding rail (15) with respect to an inner wall (14) or an outer wall (13) of the strip. The gliding rail extends from the outer wall or the inner wall of the strip in the direction of the opposed inner or outer wall. The rail is terminated by a stop edge (16) which cooperates with slides. An independent claim is also included for a strip of an apron of a roller slat blind including an apron strip blocking device.
