Abstract (en)
[origin: EP1593890A1] The valve unit has several electropneumatic valves (3a-3d) assembled together for the switching of a flow under pressure. The feed and disposal of pressurized medium takes place through at least one associated valve carrier (2) with common feed passages (10a,10b) and exhaust passages (11). The valve carrier has V-shaped valve holding positions (5a-5d) for the connection of correspondingly formed valves in order to form via facing flank sides (6a,6b) of adjacent valves a cylindrical segment-like or cylindrical design.
