Abstract (en)

[origin: EP1593914A2] The combined electric heat and light radiation unit (11) has a plate which is heat and light penetrable on the radiation side and behind which is installed a brightly radiating electric lamp (16) in co-axial proximity to an elongated tubular form electric heat bar (14) which is similarly brightly radiating. The lamp is also elongated but shorter than the heat bar. Lamps may be installed on both sides in the axial extension of the heat bar. A reflector (21) pivotable around a longitudinal axis is installed in the housing (12), above the lamps.
