Abstract (en)

[origin: WO2004069204A2] The present invention relates to complexes and fusion proteins comprising an acute phase protein and an antigenic molecule, for use in the treatment or prevention of a disease. The invention specifically provides for complexes comprising an acute phase protein noncovalently bound to, or alternatively crosslinked to, an antigenic molecule. The invention also specifically provides fusion proteins comprising an acute phase protein fused via a peptide bond to an antigenic molecule.
