Abstract (en)
[origin: WO2004074386A2] The disclosed invention relates to a method of making a dry paint transfer laminate 100, comprising: extruding a paint film layer 110 over a release liner 130; and extruding a pressure sensitive adhesive layer 120 over the paint film layer 110, wherein the release liner 130 comprises: a backing liner 132 having an upper surface 133 and a lower surface 134; a first release coating layer 135 overlying the upper surface 134 of the backing liner 132; the first release coating layer 135 comprising a resinous material hardened or cured to bond to the backing liner 132 and form a matte release surface spaced from the backing liner 132, the matte release surface contacting the extruded paint film layer 110; the matte release surface of the release liner 130 releasably adhered to the paint film layer 110 for transferring a matte finish to the paint film layer 110 when the release liner 130 is removed therefrom.
