Abstract (en)

[origin: WO2004071768A1] The invention relates to a method for replacing printing sleeves (7) in a printing press (1), according to which printing sleeves (7) that are not used for the current printing process are stored in at least one storage device while at least one conveying apparatus (13) that comprises printing sleeve-receiving devices (14) conveys the printing sleeves (7) between the storage device and the printing press (1) in order for the replacement to take place, the printing sleeve-receiving devices (14) being able to bring the printing sleeves (7) into a position that is suitable for replacing the printing sleeves (7). The invention is characterized in that the arrangement of the printing sleeves (7) in the conveying apparatus (13) is determined by an arithmetic and control unit (19) which knows the set-point positions of the printing sleeves in the printing press during the next print job. The arithmetic and control unit (19) establishes the arrangement of the printing sleeves (7) in such a way that at least one printing sleeve-receiving device (14) remains free in the conveying apparatus (13).
