Abstract (en)
[origin: WO2004073986A1] Disclosed is a method for preadjusting at least one unit (06, 12, 15, 19) of a web-machining and/or web-processing machine (01), which influences a longitudinal register. According to the inventive method, an adjustment value (SA, k to SF, k, K1, k to K3, k) is derived for the at least one unit based on design data and is stored in a machine control unit (21).
